Geneva-based, immediately available

Professional Summary

Engineering leader with 17+ years of experience spanning software architecture, platform engineering, and team leadership — from embedded systems to SaaS at international scale. Co-founded Alaya, built and grew the engineering team from zero, and led the platform through acquisition by Benevity (Canadian unicorn, $1B+ valuation).

Combines hands-on technical depth (architecture, code review, DevOps) with full engineering management experience: hiring, onboarding, 1:1s, squad delivery, and engineering culture definition. Now focused on leading high-performing engineering squads in product companies with strong engineering culture.

Professional Experience

Senior Staff Engineer — Technical Lead & Engineering Manager Equivalent

2021 – 2026

Benevity — Geneva, Switzerland (Hybrid)

Global leader in corporate purpose software — $1B+ valuation, 800+ employees

Senior IC and de facto engineering lead post-acquisition, driving cross-team platform initiatives, technical architecture decisions, and organizational change within a global distributed engineering org. Managed engineers across two teams without direct authority.

- Led cross-team engineering initiatives across 2 squads (15+ engineers), owning technical direction, architecture decisions, and delivery outcomes — equivalent scope to an Engineering Manager role
- Operated as technical lead and squad coordinator across North America and Europe time zones, running agile ceremonies, architecture reviews, and quarterly planning in alignment with Product Management
- Pioneered AI-assisted engineering practices org-wide: LLM-based code review, multi-agent workflows, and automated quality gates — 70% adoption across both teams within 3 months
- Architected platform integration bridging the acquired European product (Alaya) into Benevity's North American platform, serving 800+ enterprise clients
- Designed data integration pipelines connecting 20+ external data sources with structured compliance and reporting workflows
- Led developer experience improvements: modernized CI/CD pipelines, reduced deployment cycle time, introduced automated testing infrastructure

Technologies: TypeScript, Node.js, React, Vue.js, Python, Java, MongoDB, PostgreSQL, AWS, Docker, Kubernetes, CI/CD, AI/ML tooling

Cofounder & Head of Technologies — Engineering Manager & Platform Architect

2016 – 2021

Alaya (now Alaya by Benevity) — Gland, Switzerland

Employee purpose platform — volunteering, giving, and CSR engagement for enterprises

Co-founded the company and built the entire engineering organization from zero: platform architecture, team hiring, engineering culture, agile processes, and squad delivery through to successful acquisition. Sole technical leader for the first 12 months, then grew and managed a team of 6 engineers.

- Built and led the engineering team from zero: defined hiring bar, conducted technical interviews, onboarded 6 engineers, established code review culture and architectural standards — full Engineering Manager scope
- Owned squad delivery end-to-end: sprint planning, quarterly OKR alignment with business stakeholders, monthly releases to 50+ enterprise clients across Switzerland and France
- Drove foundational software architecture decisions (microservices decomposition, data storage strategy, API design, multi-tenancy) that survived acquisition due diligence and continued as the production core at Benevity
- Led performance management: structured 1:1s, quarterly growth goals, and one formal PIP process — zero unplanned attrition in 4 years
- Led technical due diligence process resulting in successful acquisition by Benevity (Canadian unicorn, $1B+ valuation)
- Designed and built the full platform architecture from scratch — API layer, data models, service boundaries, cloud infrastructure on AWS

Technologies: TypeScript, React, Redux, Node.js, MongoDB, PostgreSQL, Redis, Docker, AWS, REST APIs

Full Stack Engineer

2016 – 2018

État de Genève — Geneva, Switzerland

Canton of Geneva public administration

Concurrent role alongside Alaya. Built public sector applications for Geneva's education information system (SIEF), coordinating across multiple government teams.

- Developed full-stack applications for the SIEF education platform serving the Canton of Geneva — Java/Spring Boot backend with Angular frontend
- Coordinated with architecture, infrastructure, and business teams across the public administration — multi-team delivery experience
- Deepened Java ecosystem expertise (Spring Boot, Hibernate, Oracle) in a compliance-heavy, government-scale environment

Technologies: Java, Spring Boot, Hibernate, Angular, AngularJS, REST, Oracle, Jenkins

Software Engineer
2015 – 2016

SQLI Group — Geneva, Switzerland

Consulting group — embedded at eJust startup

- Built an online commercial dispute resolution platform — full-stack Java/Spring MVC backend with AngularJS frontend
- Solid Java ecosystem experience: Spring MVC, Spring Data, Hibernate, SQL Server in a production SaaS context

Technologies: JavaScript, AngularJS, Java, Spring MVC, Spring Data, Hibernate, SQL Server, REST

Hybrid & Desktop App Developer
2014 – 2015

Castr (via MC Dev consulting) — Paris, France

- Developed hybrid mobile and desktop app for Castr, a geolocated social news platform
- Cross-platform development: Ionic/Cordova mobile + Node.js/Express backend

Technologies: JavaScript, ES6, AngularJS, Node.js, Express, Ionic, Cordova

Software Architect (GWT)
2011 – 2014

Sagemcom — Paris, France

Global telecom equipment manufacturer — set-top boxes for Orange, Numericable

Led the design of an embedded UI platform for functional testing and validation across multiple set-top box environments for major telecom operators.

- Designed and built an embedded JavaScript/Java UI platform using GWT for functional testing of set-top boxes for Orange and Numericable
- Platform showcased at CES 2011 and CES 2012 — recognized for innovation in embedded UI testing
- Bridged embedded systems and UI layers, reducing validation cycles and improving QA workflows
- Early technical leadership: defined platform architecture and technical standards for the team

Technologies: GWT, JavaScript, Java, Embedded Systems

Software Engineer
2007 – 2011

Artaud Courtheoux et Associés — Paris, France

- 4 years of foundational engineering experience building enterprise software in Java and .NET

Technologies: Java, .NET, Enterprise Applications

Skills

PLATFORM & ARCHITECTURE

Engineering Management (Squad Leadership) · Software Architecture & System Design · Platform Engineering · Distributed Systems & Microservices · API Design (REST, GraphQL) · Event-Driven Architecture · Cloud Infrastructure (AWS) · DevOps & CI/CD · Scalability & Reliability

TECHNICAL

TypeScript / Node.js · Java / Spring Boot · Python · React / Vue.js · MongoDB / PostgreSQL · Redis · Docker / Kubernetes · GitHub Actions / CI/CD · AI/ML Integration & Tooling

LEADERSHIP & STRATEGY

Squad Delivery & Monthly Release Cadence · Hiring, Onboarding & Performance Management · Engineering Culture Definition · Cross-Functional Collaboration (Product, Design, Stakeholders) · Technical Cofounder (0 to Acquisition) · Agile & DevOps Practices (Sprint, Kanban, OKRs) · AI-Augmented Engineering Workflows · Servant Leadership & Mentoring

Education

Master's Degree (MSc) — Computer Engineering
2004 – 2007

ESGI — École Supérieure de Génie Informatique — Paris, France

Languages

French — Native **English** — Professional
